

Choose From Three Surgical Suite Luminaires.

The nature of surgery has changed and to satisfy these changes we offer choice. To simplify the choice of a complicated fixture we provide a summary of features.

The EF and EG Series

Intended for the basic suites. This series is the most economical and still has many standard features such as asymmetric lenses and RFI filtering.

The F and G Series

This series has the many exclusive features found in suite fixtures. It is the only supplemental surgical suite luminaire to be offered with continuous rectangles. Intended for the areas where the highest light levels need to be met, this feature moves fixtures closer to the table than any other.

The OF and OG Series

The O stands for optimized. This fixture has the widest array of features and is ready for the highest standards applied to the surgical arena. Cleanroom ratings and NSF listed gaskets combine with anti-microbial finishes and smooth surfaces for the cleanest suite solution.
